CBAM compliance – we guarantee dependability for your supply chain

Dear Sir or Madam,

As your dependable retail partner for C-parts, we know that regulatory requirements such as the new EU Carbon Border Adjustment Mechanism (CBAM) can have massive impacts on your procurement processes. With the entry into force of Regulation (EU) 2023/956, the European Union has created an instrument to make the carbon footprint of imported goods transparent. For many companies, this means significant additional bureaucratic effort and legal uncertainties.

We are happy to take this burden off your shoulders.

As a responsible manufacturer and importer, we have already taken all necessary precautions to comply with the strict requirements of the European Commission:

- **Assumption of reporting obligations:** According to Implementing Regulation (EU) 2023/1773, we, as the importer, take on the complete recording and reporting of "emissions" as part of the quarterly reports.
- **Verified Data Quality:** Through frequent audits, we ensure that the delivered emission data complies with the official EU calculation standards.
- **Security:** We have thoroughly prepared for the regulatory phase starting in 2026. By registering early as an **approved CBAM applicant**, we ensure the continuity of your goods supply without customs-related delays.

Our goal is for you to continue focusing on your core business while we take care of a **compliant and future-proof** supply chain in the background. With us by your side, CBAM is not a bureaucratic obstacle, but a testament to shared responsibility and success.

Best regards,

HONSEL Distribution GmbH & Co. KG
